

WHEEL RIMS

The precision involved in the engineering technique used to produce wheels for tubed and tubeless tyres has allowed us to offer a wheel that represents an excellent combination of durability, strength, stiffness and price.

FEATURES OF WHEEL RIMS

1. Formed cold rolled steel & the sections cater for high strength and fatigue life
2. Rims are finished for higher corrosive resistance
3. Materials and sections are optimized to achieve less weight and enhanced performance
4. Rims are designed with improved air entry pockets to increase brake drums cooling efficiency
5. Wheel rim section meets international standards

QUALITY TESTS

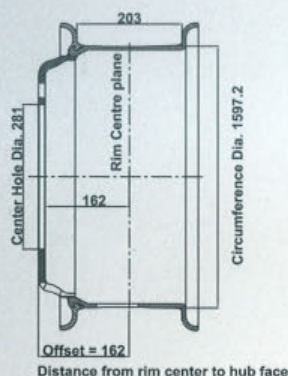

These products are tested and validated for its reliability conforming to YORK's standard specifications:

1. Cornering fatigue test as per SAE J627
2. Radial fatigue test as per SAE J627
3. Unbalanced weight test QC/T242
4. Painting property test
